

Lampiran

Bagian ini berisi inspirasi pada program reservasi hotel.

- Inspirasi program untuk pengisian tanggal, bulan, dan tahun :

```
import sys, datetime, time

#inDate = sys.argv[1]
inDate = 29-Apr-2013-15:59:02

def getMonth(month):
    monthDict = {'Jan': '01', 'Feb': '02', 'Mar': '03', 'Apr': '04', 'May': '05', 'Jun': '06', 'Jul': '07', 'Aug': '08', 'Sep': '09', 'Oct': '10', 'Nov': '11', 'Dec': '12'}
    for k, v in monthDict.iteritems():
        if month == k:
            return v

day = inDate[:2]
#print day
month = inDate[3:6]
#print month
year = inDate[7:11]
#print year
time = inDate[-8:]
#print time

newDate = year+getMonth(month)+day
newDateTime = newDate+" "+time

print newDate
print newDateTime
```

Sumber : <https://www.it-swarm.dev/id/python/mengubah-waktu-tanggal-yyyy-mm-dd-hh-mm-ss/1071990047/>

- Inspirasi program untuk rentang waktu satuan tanggal

```
import datetime

a = datetime.datetime.today()
numdays = 100
dateList = []
```

```
for x in range (0, numdays):  
    dateList.append(a - datetime.timedelta(days = x))  
print dateList
```

Sumber : <https://www.it-swarm.dev/id/python/membuat-rentang-tanggal-dengan-python/957692062/>

- Inspirasi penggunaan Value Error pada program

```
percent = 100  
while True:  
    try:  
        pyc = int(input('enter pyc :'))  
        tpy = int(input('enter tpy:'))  
        percent = (pyc / tpy) * percent  
        break  
    except ZeroDivisionError as detail:  
        print 'Handling run-time error:', detail
```
